

La Tabella Periodica ufficiale IUPAC riportata a pag.3, con il nome degli elementi in italiano e con le masse atomiche relative riportate con quattro cifre significative, può essere utilizzata dagli studenti durante la prova scritta.

La tabella contiene una novità molto importante per la chimica e tutte le altre scienze: la IUPAC ha ufficialmente riconosciuto che per 10 elementi non è possibile dare un unico valore di massa atomica a causa della variabilità della composizione isotopica dell'elemento nei diversi campioni considerati.

Per tali elementi viene riportato un intervallo di valori [a,b] entro cui può essere compresa la massa atomica relativa per l'elemento in un dato campione (vedi H, Li, B, C, N, O, Si, S, Cl, Tl).

Ai fini analitici e commerciali per tali elementi IUPAC ammette che possono essere utilizzati i seguenti valori di massa atomica

B	10.81
C	12.011
Cl	35.45
H	1.008
Li	6.94
N	14.007
O	15.999
Si	28.085
S	32.06
Tl	204.38

che approssimati a 4 cifre significative diventano

B	10.81
C	12.01
Cl	35.45
H	1.008
Li	6.94
N	14.01
O	16.00
Si	28.09
S	32.06
Tl	204.4

Per maggiori dettagli relativi alla decisione IUPAC vedi: <http://www.iupac.org>

IUPAC Periodic Table of the Elements

PURE AND APPLIED CHEMISTRY

Notes

- IUPAC 2009 Standard atomic weights abridged to four significant digits (Table 4 published in *Pure Appl. Chem.* 83, 359-396 [2011]; doi:10.1351/PAC-REP-10-09-14). The uncertainty in the last digit of the standard atomic weight value is listed in parentheses following the value. In the absence of parentheses, the uncertainty is one in that last digit. An interval in square brackets provides the lower and upper bounds of the standard atomic weight for that element. No values are listed for elements which lack isotopes with a characteristic isotopic abundance in natural terrestrial samples. See PAC for more details.

- "Aluminum" and "caesium" are commonly used alternative spellings for "aluminium" and "caesium."

- Claims for the discovery of all the remaining elements in the last row of the Table, namely elements with atomic numbers 113, 115, 117 and 118, and for which no assignments have yet been made, are being considered by a IUPAC and IUPAP Joint Working Party.

For updates to this table, see iupac.org/reports/periodic_table/. This version is dated 1 June 2012.
