# **Global Health: international monographic course**

## **Learning Objectives**

Global health is an attempt to address health problems and issues that transcend national boundaries. The underlying assumption is that the world's health problems are shared and are best tackled by cooperative action and sharing of innovative solutions.

The monographic course is designed as introductory in nature and will help students to address the major challenges of global health. The official language of the course is English and this will contribute to the concept that future medical doctors should be prepared to work in an international and interprofessional context.
