

# Final Evaluation Notice – 9<sup>th</sup> December 2025

First of all, I would like to acknowledge the frustration that many of you experienced during the exam due to the reduced working time, technical issues, and the overall stressful conditions. For this reason, I have carried out several checks and recalibrations to ensure the fairest evaluation possible for everyone.

## 1. Adjustment of ambiguous questions

Three questions generated particular uncertainty:

- **Confidence interval question** → *all response options have been considered valid*, as the wording contained an inaccuracy.
- **Upper tail of the normal distribution** → *two options have been accepted as correct*, as both were plausible and very similar.
- **Comparison of two box plots** → *two options have been accepted as correct* for the same reason.

These adjustments ensure that no student is penalised for ambiguities in the formulation of these items.

## 2. Recalibration between exam sessions

After analysing performance across the two sessions and considering the more difficult conditions in the **first session** (including the 5-minute time reduction and platform instability), an **extra-score of +3** has been assigned to all students in that session.

Since tracks 2 and 3 across both sessions reported noticeably lower average scores, a slightly higher extra-score was assigned to students in those tracks (+1 point). This adjustment ensures a fair compensation based on the actual performance differences observed across tracks.

(for recalibration score assigned to each student, please consider column 4 of the table below).

## 3. Additional compensation for all students

Given the difficulties encountered throughout the day, an **additional +1 point** has been added to *all* students.

When accessing this notice, you will also be able to review your attempt on the Moodle platform with the recalibrated score that reflects the corrections applied to the ambiguous questions (column 3 (A) in the table below shows the Moodle score).

Please note that the extra-scores assigned for time restrictions and track difficulty (column 4 (B)) are **not displayed** in the attempt itself but have been included in the computation of your **final grade (column 9)**.

In addition, the following bonuses apply:

- **+1 point** for the December session.
- **+2 points** for students who attended the Viterbo conference on 16 October (if recorded in class).

To accept or reject your final grade (column 9), please complete this form by **22 December 2025**:  
<https://forms.gle/sadAMrkdVVPvKmfW6>

### **Important information about final grades**

These are the final grades, and no further adjustments will be made. Please do not send emails requesting grade negotiations.

If you are not satisfied with your result, you may retake the exam in the January, February, or summer sessions.

Although some questions may have appeared more challenging, they were fully aligned with the interpretative approach we consistently emphasised throughout the course. To support your preparation, the **+2 bonus points** awarded for participation in the Viterbo seminar will also remain available for the winter exam sessions (January and February).

I sincerely hope that these measures fairly recognise the challenges many of you faced during the exam.

Beyond this, I am unfortunately unable to make further adjustments.

Thank you for your understanding and cooperation.

Table: Scores and bonus points(\*)
