PART I

STATISTICAL MECHANICS AND SIMULATION METHODS

| | |
|---|-------------------------------------|
| Chapter 1 | |
| Statistical mechanics for computer simulators <i>by Daan Frenkel</i> | 3 |
| 1 | Introduction |
| 1.1 | Who needs statistical mechanics? |
| 2 | Entropy and temperature |
| 2.1 | System at constant temperature |
| 2.2 | Other ensembles |
| 3 | Fluctuations |
| 3.1 | Histograms and Landau Free energies |
| 4 | Classical Statistical Mechanics |
| 4.1 | Ergodicity |
| 5 | Free energy and phase behavior |
| 5.1 | Thermodynamic Integration |
| 5.2 | Tracing coexistence curves |

| | | |
|-----------|---|----|
| 6 | Perturbation Theory | 21 |
| 6.1 | Perturbation theory for hard-core systems? | 23 |
| 7 | Mean-field theory | 25 |
| 8 | Onsager's regression hypothesis | 26 |
| 9 | Linear Response Theory | 29 |
| 9.1 | Static response | 30 |
| 9.2 | Dynamic response | 31 |
| 9.3 | Dissipation | 33 |
| 9.4 | Rare Events | 38 |
| | References | 41 |
| Chapter 2 | | |
| | Introduction to molecular dynamics methods <i>by M. Sprik</i> | 43 |
| 1 | Introduction | 47 |
| 2 | Basic Molecular Dynamics | 48 |
| 2.1 | Newton's equations of motion | 48 |
| 2.2 | Criteria for time iteration in MD | 49 |
| 2.3 | Verlet algorithm | 50 |
| 3 | Dynamics in Phase Space | 51 |
| 3.1 | Hamiltonian dynamics | 51 |
| 3.2 | Liouville operators | 53 |
| 3.3 | Factorization of phase space propagators | 55 |
| 4 | MD under Constant Pressure and Temperature | 56 |
| 4.1 | Equilibrium statistical mechanics | 57 |
| 4.2 | Instantaneous temperature and pressure | 58 |
| 4.3 | Constant pressure MD | 61 |
| 4.4 | Constant temperature MD | 64 |
| 5 | Multiple Time Scales | 66 |
| 5.1 | Constraint dynamics | 67 |
| 5.2 | Multiple time steps | 69 |
| 6 | Long-Range Interactions | 70 |
| 6.1 | Dielectrics | 70 |
| 6.2 | The reaction field method | 73 |
| 6.3 | Ewald summation | 75 |
| 6.4 | Polarization fluctuations and dielectrics | 79 |
| 7 | Free Energy and Rare Events | 82 |
| 7.1 | Potential of mean force and reversible work | 82 |
| 7.2 | Constraints and free energy | 84 |
| | References | 87 |
| Chapter 3 | | |
| | Molecular dynamics for hard particles <i>by Michael P. Allen</i> | 89 |
| 1 | Introduction | 93 |
| 2 | Motivation | 93 |
| 2.1 | Hard particle models | 93 |

| | | |
|-----------|--|-----|
| 2.2 | Hard particle reference systems | 94 |
| 2.3 | Molecular timescales | 94 |
| 3 | Simulation method | 95 |
| 3.1 | Free flight dynamics | 95 |
| 3.2 | Locating collisions | 95 |
| 3.3 | Collision dynamics | 96 |
| 3.4 | Housekeeping | 97 |
| 4 | Calculation of results | 98 |
| 5 | Case study | 100 |
| | References | 105 |
| Chapter 4 | | |
| | Molecular dynamics simulation of rare events: calculation of rate constants | 107 |
| | <i>by Giovanni Ciccotti and Mauro Ferrario</i> | |
| 1 | Introduction | 111 |
| 2 | Reactive Flux Correlation Formulas and Blue Moon ensemble | 112 |
| 2.1 | Theory | 112 |
| 2.2 | Blue Moon Ensemble | 113 |
| 3 | Quantum Extensions | 117 |
| 3.1 | Adiabatic dynamics | 118 |
| 3.2 | Path integral molecular dynamics | 120 |
| | References | 122 |
| Chapter 5 | | |
| | Introduction to Monte Carlo methods I | 123 |
| | <i>by K. Binder</i> | |
| 1 | Preliminaries and Overview | 127 |
| 2 | Calculation of thermodynamic averages by importance sampling Monte Carlo methods | 129 |
| 3 | Application of the Monte Carlo method to study the phase transition of the Ising model | 133 |
| 4 | Solid-liquid transition of hard disks | 136 |
| 5 | Application of Monte Carlo simulation to study interdiffusion in binary mixtures | 140 |
| | References | 144 |
| Chapter 6 | | |
| | Introduction to Monte Carlo methods II | 147 |
| | <i>by Dietrich Stauffer</i> | |
| 1 | Down with Vienna Imperialism | 151 |
| 2 | Detailed balance and other fundamentals | 151 |
| 3 | Dynamics | 154 |
| 4 | Error estimates | 157 |
| 5 | Summary | 162 |
| | References | 162 |

| | | |
|-----------|--|-----|
| Chapter 7 | | |
| | Configurational-bias Monte Carlo | 163 |
| | <i>by Daan Frenkel and Germonda Mooij</i> | |
| 1 | Introduction | 167 |
| 1.1 | Detailed balance | 168 |
| 1.2 | Rosenbluth sampling | 168 |
| 1.3 | CBMC as 'Dynamic' Rosenbluth sampling | 169 |
| 1.4 | Continuously deformable chain | 170 |
| 2 | Efficiency of Configurational-Bias Monte Carlo | 172 |
| 2.1 | Remark | 174 |
| 3 | Results | 175 |
| | References | 177 |

PART II

PHASE TRANSITIONS

| | | |
|-----------|--|-----|
| Chapter 8 | | |
| | Theory of phase transitions beyond mean field theory | 181 |
| | <i>by D. P. Landau</i> | |
| 1 | Introduction | 185 |
| 2 | Critical Phenomena | 185 |
| 2.1 | Critical Exponent Relations | 186 |
| 2.2 | Scaling functions | 188 |
| 2.3 | Scaling Laws | 189 |
| 2.4 | Universality | 190 |
| 2.5 | Multicritical Phenomena | 191 |
| 2.6 | Surface Critical Phenomena | 193 |
| 3 | Landau Theory | 195 |
| 3.1 | Expansion and Power Laws | 195 |
| 3.2 | Ginzburg criterion | 197 |
| 4 | Renormalization Group Theory | 198 |
| 4.1 | Fundamental Ideas | 198 |
| 4.2 | Real space methods | 201 |
| 4.3 | Momentum-space formulation | 204 |
| 5 | Dynamical Critical Phenomena | 205 |
| 6 | Dynamics at first-order transitions | 208 |
| 7 | Long Flexible Polymers and the Analogy to Critical Phenomena | 210 |
| 8 | Summary | 212 |
| | References | 212 |

| | | |
|------------|---|-----|
| Chapter 9 | | |
| | Simulation of phase transitions: critical phenomena <i>by B. Dünweg</i> | 215 |
| 1 | Introduction I: A Brief Repetition of Scaling Ideas | 219 |
| 2 | Introduction II: The Computational Challenge | 222 |
| 3 | Finite-Size Scaling | 224 |
| 3.1 | The order parameter distribution function | 224 |
| 3.2 | Finite-size scaling for usual second-order transitions | 226 |
| 3.3 | Finite-size scaling for mean-field-like second-order transitions | 229 |
| 3.4 | Finite-size “scaling” for first-order transitions | 230 |
| 4 | Reweighting Techniques | 232 |
| 4.1 | Reweighting used for data analysis | 232 |
| 4.2 | A side remark: Determination of free energies via thermodynamic integration, multiple histograms or multistage sampling | 234 |
| 4.3 | Reweighting built into the simulation procedure: “umbrella sampling”, “multicanonical ensemble”, “entropic sampling” | 235 |
| 4.4 | “Expanded ensemble”, “simulated tempering” | 237 |
| 5 | Estimates for Critical Parameters | 238 |
| 6 | Simulation of Dynamic Critical Phenomena | 240 |
| 6.1 | Correlation functions at T_c | 241 |
| 6.2 | “Quenches” to T_c | 242 |
| 7 | More Complicated Hamiltonians | 244 |
| 8 | The Interfacial Free Energy | 249 |
| | References | 253 |
| Chapter 10 | | |
| | Simulation and phase diagrams <i>by Michael P. Allen</i> | 255 |
| 1 | Introduction | 259 |
| 1.1 | Thermodynamic Background | 259 |
| 1.2 | Simulations near a first-order phase transition | 260 |
| 1.3 | Methods | 262 |
| 2 | Traversing phase transitions | 262 |
| 3 | Free energies | 263 |
| 3.1 | Studies of melting | 265 |
| 3.2 | Studies of the isotropic-nematic transition | 266 |
| 3.3 | Free energy differences | 266 |
| 4 | Chemical potentials | 269 |
| 4.1 | Introduction | 269 |
| 4.2 | Excluded volume map sampling | 270 |
| 4.3 | Biased sampling | 271 |
| 4.4 | Mixtures | 272 |
| 4.5 | Gradual insertion | 272 |
| 4.6 | Practicalities | 274 |
| 5 | Bulk phase coexistence | 275 |
| 6 | Gibbs ensemble | 277 |
| 6.1 | Introduction | 277 |

| | | |
|------------|---|-----|
| 6.2 | Excluded volume map sampling | 279 |
| 6.3 | Biased sampling | 279 |
| 6.4 | Mixtures | 279 |
| 6.5 | Gradual transfer | 279 |
| 7 | Order parameter distributions | 280 |
| 8 | Conclusions | 281 |
| | References | 282 |
| Chapter 11 | | |
| | Phase transitions in random systems | 285 |
| | <i>by A. P. Young</i> | |
| 1 | Introduction | 289 |
| 2 | Simple Models | 289 |
| 3 | Averaging | 291 |
| 4 | Random Ferromagnet | 293 |
| 5 | Random Field Ising Model | 297 |
| 6 | Spin Glasses | 301 |
| 7 | Conclusions | 305 |
| | References | 306 |
| Chapter 12 | | |
| | Monte Carlo simulations of interfacial phenomena | 309 |
| | <i>by D. P. Landau</i> | |
| 1 | Introduction | 313 |
| 2 | Model and simulation technique | 314 |
| 3 | Wetting in Thick Films | 315 |
| | 3.1 Critical Wetting | 315 |
| | 3.2 First Order Wetting and Layering transitions | 316 |
| 4 | Thin Films with Equal Walls: Capillary Condensation | 317 |
| 5 | Thin Films with Competing Walls: Interface Delocalization | 319 |
| 6 | Conclusions | 322 |
| | References | 323 |
| Chapter 13 | | |
| | Molecular dynamics simulation of lipid bilayers | 325 |
| | <i>by Douglas J. Tobias, Kechuan Tu and Michael L. Klein</i> | |
| 1 | Introduction | 329 |
| | 1.1 Experimental observations on lipid bilayer structure and dynamics | 330 |
| | 1.2 Membrane simulations | 331 |
| 2 | Constant pressure and temperature MD | 332 |
| | 2.1 Statistical mechanics of extended systems | 333 |
| | 2.2 Constant NPT MD in fully flexible simulation cells | 333 |
| | 2.3 Practical aspects | 335 |
| 3 | Potential function for lipids | 336 |
| | 3.1 Headgroup and glycerol ester regions | 336 |
| | 3.2 Hydrocarbon chains | 337 |

| | | |
|------------|---|-----|
| 4 | Results for gel and liquid crystal phospholipid bilayers | 337 |
| | References | 342 |
| Chapter 14 | | |
| | Interplay of melting, wetting, overheating and faceting on metal surfaces: theory and simulation. | 345 |
| | <i>by Francesco D. Di Tolla, Erio Tosatti and Furio Ercolessi</i> | |
| 1 | Overview of the high temperature behavior of crystal surfaces | 349 |
| 2 | Surface melting, non-melting, faceting, and layering | 351 |
| 2.1 | Phenomenological theory for surface melting: review | 351 |
| 2.2 | Surface free energy anisotropy and crystal shape | 354 |
| 2.3 | Introduction to faceting | 356 |
| 2.4 | Surface non-melting and overheating | 360 |
| 2.5 | Incomplete Melting | 360 |
| 2.6 | Layering at liquid metal surfaces | 360 |
| 2.7 | Existing simulations of surface melting/non-melting and overheating | 361 |
| 3 | Surface simulations with MD: technical issues | 363 |
| 3.1 | The glue potential | 364 |
| 3.2 | Determination of T_m | 366 |
| 3.3 | Processing of the simulation results | 366 |
| 4 | Simulation of melting/nonmelting at surfaces: results | 368 |
| 4.1 | A case of surface melting: Al(110) | 368 |
| 4.2 | Nonmelting and overheating: Al(111) and Al(100) | 372 |
| 4.3 | A case of incomplete surface melting: Pb(100) | 378 |
| 4.4 | Simulation of liquid surfaces | 379 |
| 5 | Layering and the microscopic origin of non-melting | 381 |
| 5.1 | The changeable role of the layering forces on surface melting | 381 |
| 5.2 | Dependence of the interaction on the orientation | 383 |
| 5.3 | Simulated recrystallizations | 387 |
| 6 | Interplay between non-melting, wetting, and faceting | 390 |
| 6.1 | Wetting a solid surface with a drop of melt: theory | 390 |
| 6.2 | Non-melting induced faceting | 393 |
| 6.3 | Quantitative results, and MD simulations | 393 |
| 6.4 | Comparison with experiments | 394 |
| 7 | Summary, and outlook | 396 |
| | References | 396 |

PART III

QUANTUM THEORY AND SIMULATIONS

| | | |
|--|--|-----|
| Chapter 15 | | |
| Quantum theory | | 401 |
| <i>by Hans De Raedt</i> | | |
| 1 | Introduction | 405 |
| 2 | Exact Diagonalization | 407 |
| 2.1 | Methods to compute the full spectrum | 407 |
| 2.2 | Methods to compute the part of spectrum | 407 |
| 3 | Variational Methods | 410 |
| 3.1 | Fundamental Theorems | 410 |
| 3.2 | Trial State Approach | 411 |
| 3.3 | Recursive Variational Techniques | 412 |
| 3.4 | Stochastic Diagonalization | 413 |
| 3.5 | Computation of physical properties | 414 |
| 4 | Trotter-Suzuki Formulae | 415 |
| 5 | Path Integrals | 419 |
| 6 | Quantum Dynamics | 421 |
| 6.1 | Application: Quantum interference of two identical particles | 427 |
| 7 | Quantum Monte Carlo: Application | 430 |
| 7.1 | Theory | 431 |
| 7.2 | Hubbard-Stratonovitch Transformation | 433 |
| 7.3 | Application | 435 |
| | References | 440 |
| Chapter 16 | | |
| Path integral Monte Carlo methods for fermions | | 443 |
| <i>by D. M. Ceperley</i> | | |
| 1 | Introduction | 447 |
| 2 | Imaginary Time Path Integrals | 449 |
| 3 | The Direct Fermion Path Integral Method | 451 |
| 4 | The Restricted Path Integral Method | 454 |
| 5 | The Reference Point | 457 |
| 6 | An Example of Restricted Paths | 458 |
| 7 | Nodes of the Density Matrix | 460 |
| 8 | Some Technical Details of RPIMC | 466 |
| 8.1 | The action | 466 |
| 8.2 | Sampling restricted paths | 471 |
| 9 | Permutations, the Momentum Distribution and Fermi Liquids | 473 |
| 10 | Other Fermion Methods | 475 |

| | | |
|------------|---|-----|
| 10.1 | Hall's method | 475 |
| 10.2 | Slice-wise antisymmetrization | 476 |
| 10.3 | Ignoring the sign | 477 |
| 10.4 | Cancellation | 477 |
| 11 | Current Applications of Fermion Path Integrals | 478 |
| 12 | Future Prospects | 479 |
| | References | 481 |
| Chapter 17 | | |
| | Monte Carlo variational theory of condensed phases of ^4He <i>by D.E. Galli and L. Reatto</i> | 483 |
| 1 | Introduction | 487 |
| 2 | Shadow wave function | 489 |
| 2.1 | Liquid and solid bulk ^4He | 489 |
| 2.2 | Local density shadow wave function | 490 |
| 3 | Self-binding of a quantum system | 491 |
| 3.1 | Shadow wave function for a self-bound state | 492 |
| 3.2 | Film | 493 |
| 3.3 | Clusters | 495 |
| 4 | Excited states | 496 |
| 4.1 | Feynman shadow wave function (F-swf) | 496 |
| 4.2 | Feynman-Cohen shadow wave function (FC-swf) | 497 |
| 5 | Conclusion | 498 |
| | References | 499 |
| Chapter 18 | | |
| | Path integral simulations of adsorbed molecular layers: phase transitions <i>by Martina Kreer and Peter Nielaba</i> | 501 |
| 1 | Introduction | 505 |
| 2 | Orientational Phase Transitions in Adsorbed Monolayers | 505 |
| 2.1 | The Order of the Herringbone Transition of N_2 on Graphite | 505 |
| 2.2 | Quantum Effects on the Orientational Phase Transition | 506 |
| 3 | Phase Transitions in Classical and Quantum 2D Fluids | 508 |
| 3.1 | Phase Transitions in Nonadditive Symmetric Hard Disc Fluids | 508 |
| 3.2 | Path Integral Monte Carlo Simulations in the Gibbs Ensemble | 509 |
| 3.3 | Density functional theory | 510 |
| 3.4 | H_2 and D_2 adsorbed on graphite | 511 |
| 4 | Random-field induced rounding of the Ising-type transition in physisorbed $(\text{CO})_{1-x}(\text{N}_2)_x$ mixtures | 513 |
| 5 | Summary | 516 |
| | References | 517 |
| Chapter 19 | | |
| | Cluster algorithms with emphasis on quantum spin systems <i>by J. E. Gubernatis and N. Kawashima</i> | 519 |
| 1 | Introduction | 523 |

| | | |
|-----|---|-----|
| 2 | Background | 524 |
| 2.1 | Monte Carlo Refresher | 524 |
| 2.2 | Swendsen-Wang Algorithm | 525 |
| 2.3 | The Fortuin-Kasteleyn Transformation | 526 |
| 2.4 | Cluster Algorithm Characteristics | 528 |
| 3 | Cluster Algorithm Construction | 529 |
| 3.1 | Dual Monte Carlo | 529 |
| 3.2 | Free Cluster Algorithms | 530 |
| 3.3 | The Linear System of Equations | 530 |
| 3.4 | Labeling and Joint Probabilities | 530 |
| 3.5 | Cluster Algorithms with Local Labeling Rules | 531 |
| 3.6 | Interim Summary | 532 |
| 4 | Quantum Spin Systems | 532 |
| 4.1 | Cluster Algorithm: $S = \frac{1}{2}$ Ferromagnetic Heisenberg Model | 532 |
| 4.2 | Cluster Algorithm: $S = 1$ Ferromagnetic Heisenberg Model | 536 |
| 4.3 | Cluster Algorithm: General XYZ Model | 539 |
| 5 | Summary | 540 |
| | References | 542 |

Chapter 20

Feynman path centroid methods for condensed phase quantum dynamics 545
by Gregory A. Voth

| | | |
|-----|--|-----|
| 1 | Introduction | 549 |
| 2 | Activated Dynamics and Quantum Transition State Theory | 550 |
| 2.1 | Formalism | 550 |
| 2.2 | Selected Applications | 550 |
| 3 | The Centroid Molecular Dynamics Method | 552 |
| 3.1 | Formalism | 552 |
| 3.2 | Numerical Applications of CMD | 554 |
| 4 | Concluding Remarks | 556 |
| | References | 556 |

PART IV

DENSITY FUNCTIONAL APPROACH

Chapter 21

Density functional theory 561
by Walter Kohn

| | | |
|---|---------------------------------|-----|
| 1 | Introduction | 565 |
| 2 | Basic Density Functional Theory | 566 |
| 3 | Generalizations [2,3,4] | 569 |

| | | |
|------------|--|-----|
| 4 | Some Representative Quantitative Results | 569 |
| 5 | A DFT/Density Matrix Method Scaling Linearly with the Number of Atoms [12] | 570 |
| | References | 572 |
| Chapter 22 | | |
| | Density functional methods at finite temperature <i>by Jean-Pierre Hansen and Enrico Smargiassi</i> | 573 |
| 1 | Inhomogeneous systems and effective interactions | 577 |
| 2 | Density functional theory: basic principles and standard approximations | 579 |
| 2.1 | Linear response | 582 |
| 2.2 | Gradient expansion | 582 |
| 2.3 | Mean-field approximation | 583 |
| 2.4 | Functional Taylor expansion | 584 |
| 3 | A gentle application of DFT: sedimentation equilibrium and osmotic equation-of-state | 584 |
| 4 | A density functional approach to polyelectrolytes | 586 |
| 5 | "Ab-initio" Monte Carlo sampling | 590 |
| 6 | The quantum regime: orbital-free density functionals | 594 |
| 6.1 | Thomas-Fermi Molecular Dynamics | 596 |
| 6.2 | Gradient correction to TF | 597 |
| 6.3 | The Hohenberg-Kohn functional | 597 |
| 6.4 | Hybrid functionals | 598 |
| 6.5 | Kohn-Sham vs. orbital-free functionals | 598 |
| | References | 599 |
| Chapter 23 | | |
| | Molecular dynamics from first principles <i>by R. Car</i> | 601 |
| 1 | Introduction | 605 |
| 2 | The potential energy function | 607 |
| 3 | The first-principles molecular dynamics equations | 613 |
| 4 | Applications to phase transitions. | 620 |
| 5 | Excited state molecular dynamics | 626 |
| | References | 632 |
| Chapter 24 | | |
| | Car-Parrinello method and adiabatic invariants <i>by G. Pastore</i> | 635 |
| 1 | Introduction | 639 |
| 2 | From parametric optimization to adiabatic dynamics | 640 |
| 3 | Adiabatic invariants and departure from the minimum | 643 |
| 4 | The evolution of the slow variables | 646 |
| 5 | Conclusions | 647 |
| | References | 647 |

Chapter 25

| | | |
|---|--|-----|
| | Path integrals and <i>ab initio</i> molecular dynamics by Ali Alavi | 649 |
| 1 | Introduction | 653 |
| 2 | Statistical Mechanical preliminaries | 653 |
| | 2.1 One-electron systems | 653 |
| 3 | Path integration | 654 |
| 4 | Path integration: an application | 656 |
| 5 | Real-space propagators | 657 |
| 6 | Higher-order propagators | 658 |
| 7 | Molecular Dynamics | 658 |
| 8 | Many-Electron systems - Non-interacting | 659 |
| 9 | Interacting electrons - Finite temperature DFT | 661 |
| | References | 666 |

PART V

POLYMERS, PROTEINS ETC...

Chapter 26

| | | |
|---|---|-----|
| | Computer simulation methods for polymer physics by Kurt Kremer | 669 |
| 1 | Introduction | 673 |
| 2 | Polymer simulations: general considerations | 675 |
| 3 | Algorithms for static properties | 677 |
| | 3.1 Static methods for isolated chains | 677 |
| | 3.2 "Dynamic" methods for static properties | 687 |
| | 3.3 More complex single polymer problems: Two examples | 692 |
| 4 | Simulations of polymer dynamics | 694 |
| | 4.1 Bond fluctuation algorithm | 697 |
| | 4.2 Molecular dynamics | 700 |
| | 4.3 Monte Carlo versus molecular dynamics for melts | 701 |
| 5 | Dynamics of Melts: Reptation | 702 |
| | 5.1 Monomer motion and relaxation functions | 702 |
| | 5.2 Comparison to experiment | 707 |
| | 5.3 The crossover from semi-dilute and deviations from Rouse | 708 |
| 6 | Extensions: glasses and networks | 711 |
| 7 | Further Reading | 714 |
| 8 | Conclusions - Other Problems | 719 |
| | References | 720 |

Chapter 27

| | |
|---|-----|
| Simulation of polymers using realistic potentials <i>by J.-P. Ryckaert</i> | 725 |
|---|-----|

| | | |
|-----|--|-----|
| 1 | Introduction | 729 |
| 2 | Polyethylene (PE) and polypropylene (PP) | 730 |
| 3 | Modelling hydrocarbons | 732 |
| 3.1 | Fully atomic models | 733 |
| 3.2 | United atoms models | 734 |
| 3.3 | Flory potential | 735 |
| 3.4 | Single chain models with excluded volume forces | 736 |
| 4 | Recent results on the single chain route to study PE and PP melts | 737 |
| 4.1 | PE and PP results at θ point according to single chain models neglecting non local interactions | 738 |
| 4.2 | PE results according to single chain model with non local interactions | 738 |
| 4.3 | PP results according to single chain model with non local interactions | 740 |
| 5 | Recent results on the many chains route to study PE | 742 |
| 5.1 | MD simulation of $C_{44}H_{90}$ melts | 742 |
| 5.2 | Rotator phases of paraffins $C_{19}H_{40}$ | 743 |
| 6 | Perspectives | 744 |
| 7 | Acknowledgments | 745 |
| | References | 745 |

Chapter 28

| | |
|---|-----|
| Molecular dynamics simulation of proteins <i>by Massimo Marchi</i> | 747 |
|---|-----|

| | | |
|-----|---|-----|
| 1 | Introduction | 751 |
| 2 | What is a Protein | 752 |
| 3 | Interaction Potentials | 754 |
| 3.1 | Bonded Interactions | 755 |
| 3.2 | Non-bonded Interactions | 757 |
| 4 | Covalent Topology and Potential Parameters | 759 |
| 5 | What to Simulate and How | 759 |
| 6 | Handling Long Range Forces | 762 |
| 7 | Simulations in Other Ensembles | 765 |
| 8 | Molecular Dynamics Simulation of the Type I Crystal of BPTI | 767 |
| | References | 774 |

Chapter 29

| | |
|---|-----|
| Molecular simulation methods for generating ensembles or trajectories consistent with experimental data <i>by W.F. van Gunsteren, A.P. Nanzer and A.E. Torda</i> | 777 |
|---|-----|

| | | |
|---|---|-----|
| 1 | Introduction | 781 |
| 2 | Relations between observables Q and atomic degrees of freedom or force field parameters q | 782 |

| | | |
|-----|---|-----|
| 3 | Techniques to couple $\langle Q \rangle$ to Q_0 in a molecular simulation | 784 |
| 3.1 | Constraint methods | 785 |
| 3.2 | Penalty function methods | 785 |
| 3.3 | Extended system methods | 786 |
| 3.4 | Weak-coupling methods | 786 |
| 3.5 | Stochastic methods | 787 |
| 4 | Conclusions | 787 |
| | References | 788 |

PART VI

MICROSCOPIC APPROACH TO DYNAMICAL AND NONEQUILIBRIUM PHENOMENA

Chapter 30

| | | |
|--|--|-----|
| | The character of the nonequilibrium steady state: beautiful formalism meets ugly reality | 791 |
| | <i>by Brad Lee Holian</i> | |

| | | |
|---|--|-----|
| 1 | Introduction | 795 |
| 2 | Response Theory | 805 |
| 3 | Free Energy at the Nonequilibrium Steady State | 812 |
| 4 | Conclusions | 821 |
| | References | 822 |

Chapter 31

| | | |
|--|--|-----|
| | Simple and complex fluids under shear | 823 |
| | <i>by S. Hess, M. Kröger, W. Loose, C. Pereira Borgmeyer, R. Schramek, H. Voigt, and T. Weider</i> | |

| | | |
|-----|--|-----|
| 1 | Introduction | 827 |
| 2 | Fluids of Spherical Particles | 827 |
| 2.1 | Molecular dynamics | 827 |
| 2.2 | Plane Couette flow | 829 |
| 2.3 | Viscosity and other rheological properties | 830 |
| 2.4 | Structural changes in the various flow regimes | 830 |
| 2.5 | Colloidal dispersions | 832 |
| 2.6 | Mixtures | 834 |
| 3 | Complex fluids | 835 |
| 3.1 | Polymer melts | 835 |
| 3.2 | Nematic liquid crystals | 837 |
| 3.3 | Ferro-fluids and magneto-rheological fluids | 839 |
| | References | 840 |

| | | |
|------------|---|-----|
| Chapter 32 | | |
| | Schematic modelling of superionic conduction | 843 |
| | <i>by J. Marro</i> | |
| 1 | Introduction | 847 |
| 2 | Phase Transitions | 849 |
| 3 | Correlations | 854 |
| | References | 857 |
| Chapter 33 | | |
| | Search for a cheap molecular dynamics | 859 |
| | <i>by Berni Alder</i> | |
| 1 | Introduction | 863 |
| 2 | Navier-Stokes | 863 |
| 3 | Lattice Boltzmann | 864 |
| 4 | Molecular Dynamics | 865 |
| 5 | Lattice Gas | 865 |
| 6 | Bird Method | 866 |
| 7 | Hybrid Scheme or Adaptive Algorithm | 867 |
| 8 | Consistent Boltzmann and Enskog extension | 869 |
| 9 | Conclusions | 869 |
| | References | 869 |
| Chapter 34 | | |
| | Round-table discussions on large-scale computations by non-equilibrium molecular dynamics: how far we can go? | 871 |
| | <i>by Michel Mareschal</i> | |

PART VII

MISCELLANEOUS TOPICS: ASPECTS OF COMPUTATIONAL IMPLEMENTATION, HISTORICAL RECOLLECTIONS, ETC...

| | | |
|------------|---|-----|
| Chapter 35 | | |
| | Parallelization of computational physics problems | 887 |
| | <i>by Dieter W. Heermann</i> | |
| 1 | Introduction | 891 |
| 2 | Concepts to Exploit Parallelism | 892 |
| 3 | Poor Mans Parallelization | 892 |
| 3.1 | Data Parallel Algorithms | 893 |
| 3.2 | Algorithmic Parallelism | 895 |
| 3.3 | Domain Decomposition | 897 |

| | | |
|-----|---|-----|
| 4 | Machine Considerations | 898 |
| 5 | Language Considerations | 899 |
| 6 | A new algorithm for the simulation of large lattice systems | 900 |
| 7 | A Case Study | 902 |
| 7.1 | The Hybrid Monte Carlo Method | 902 |
| 7.2 | Parallelization of the Polymer System | 904 |
| | References | 906 |

Chapter 36

| | |
|---|-----|
| On some additional recollections, and the absence thereof, about the early history of computer simulations in statistical mechanics | 907 |
| <i>by W. W. Wood</i> | |

Chapter 37

| | |
|---|-----|
| Biologically motivated Monte Carlo: immunology and ageing | 913 |
| <i>by Dietrich Stauffer</i> | |

| | | |
|---|--------------------------------|-----|
| 1 | Introduction | 917 |
| 2 | Concepts and models for ageing | 918 |
| 3 | Techniques for ageing | 919 |
| 4 | Ageing results | 920 |
| 5 | Immunology | 921 |
| | References | 924 |

PART VIII

SEMINARS

Seminar 1

| | |
|---|-----|
| Wigner Approach in Quantum Statistical Mechanics and Quantum Generalization Molecular Dynamics Method | 927 |
| <i>by V.S. Filinov</i> | |

Seminar 2

| | |
|--|-----|
| Complex - valued path integrals Monte Carlo simulation of quantum electrons in disordered system of scatterers | 931 |
| <i>by V.S. Filinov</i> | |

Seminar 3

| | |
|---|-----|
| Symplectic algorithms for the simulation of hamiltonian dynamic | 935 |
| <i>by Lapo Casetti</i> | |

Seminar 4

- On the adsorption process in polymer brushes: a Monte Carlo study 939
by A. Kopf, J. Baschnagel, J. Wittmer and K. Binder

Seminar 5

- Cluster approach and Monte Carlo efficient dynamics in frustrated and disordered spin systems 943
by Mario Nicodemi

Seminar 6

- Ordered and chaotic dynamics in the simulation of real systems 947
by Alexander Tenenbaum

Seminar 7

- Do conformal crystals exist in uniform fields? 951
by K.W. Wojciechowski, J. Kłos and A.C. Brańka

Seminar 8

- Relaxation times in an anharmonic crystal with diluted impurities 955
by Roberto Livi
