# COS'È UN FARMACOFORO?

Farmacoforo è l'insieme degli elementi strutturali o funzionali comuni ad un set di molecole caratterizzate da attività biologica verso un target biologico

# COS'È UN FARMACOFORO?

Farmacoforo è l'insieme degli elementi strutturali o funzionali comuni ad un set di molecole caratterizzate da attività biologica verso un target biologico

1998  
Camille Wermuth

Farmacoforo è l'insieme delle features steriche ed elettrostatiche necessarie a garantire un'interazione intra-molecolare ligando-recettore tale da scatenare una risposta biologica.
