

- iii) Studiare la convergenza della successione $\{Y_n\}_{n \geq 1}$.
- ii) Calcolare EY_n e EV_n .
- i) Ricavare la distribuzione di Y_n .
per ogni n , e sia $X_n = n(1 - X_n)$.

$$f_{X_n}(x) = \begin{cases} 0 & \text{altronde} \\ nx^{n-1}, & 0 < x < 1 \end{cases}$$

3) Sia X_n una v.a. con densità

-
- iv) Calcolare $var(U)$ e $var(V)$.
- iii) Calcolare EU, EV e EW .
- ii) Le variabili U e V sono indipendenti?
- i) Calcolare la $P\{U = X\}$.
dove X e Y sono due v.a. indipendenti ed esponezionali di parametri rispettivamente

$$V = \max\{X, Y\},$$

e

$$U = \min\{X, Y\}$$

2) Siano date le v.a.

commentando i risultati ottenuti.

-
- iii) $P(A_n)$
- ii) $P(A_1|A_2)$
- i) $P(A_2)$
1) Un'urna contiene a palline arancioni e b palline bianche. Si estrae una pallina all'«-esempio estrazione è arancione». Calcolare le seguenti probabilità:
e la si rimette nell'urna insieme ad altre c palline dello stesso colore di quelle estratte. Si ripete più volte tale procedura. Sia A_n l'evento "la pallina estratta
