

***Assignment 3, part a***

Find evidence of health disparities in a dimension of your choice (eg health status, obesity, hypertension ...) and according to an individual characteristic of your choice (age, gender, income, race, education, employment status, employment sector, rural vs urban ...).

Comment your data and propose an explanation for the observed evidence. Do not forget to cite your data source.

[NB an interesting source of data is: [https://www.who.int/data/inequality-monitor/assessment\\_toolkit](https://www.who.int/data/inequality-monitor/assessment_toolkit) but any source is ok]

***Assignment 3, part b***

Ch 4. Analytical problems: 12 (d); 13 (c); 14 (a)-(c)
