

CONFIGURAZIONE RELATIVA

Assegnazione a zuccheri, acidi saccarici e α -amminoacidi in riferimento alla gliceraldeide

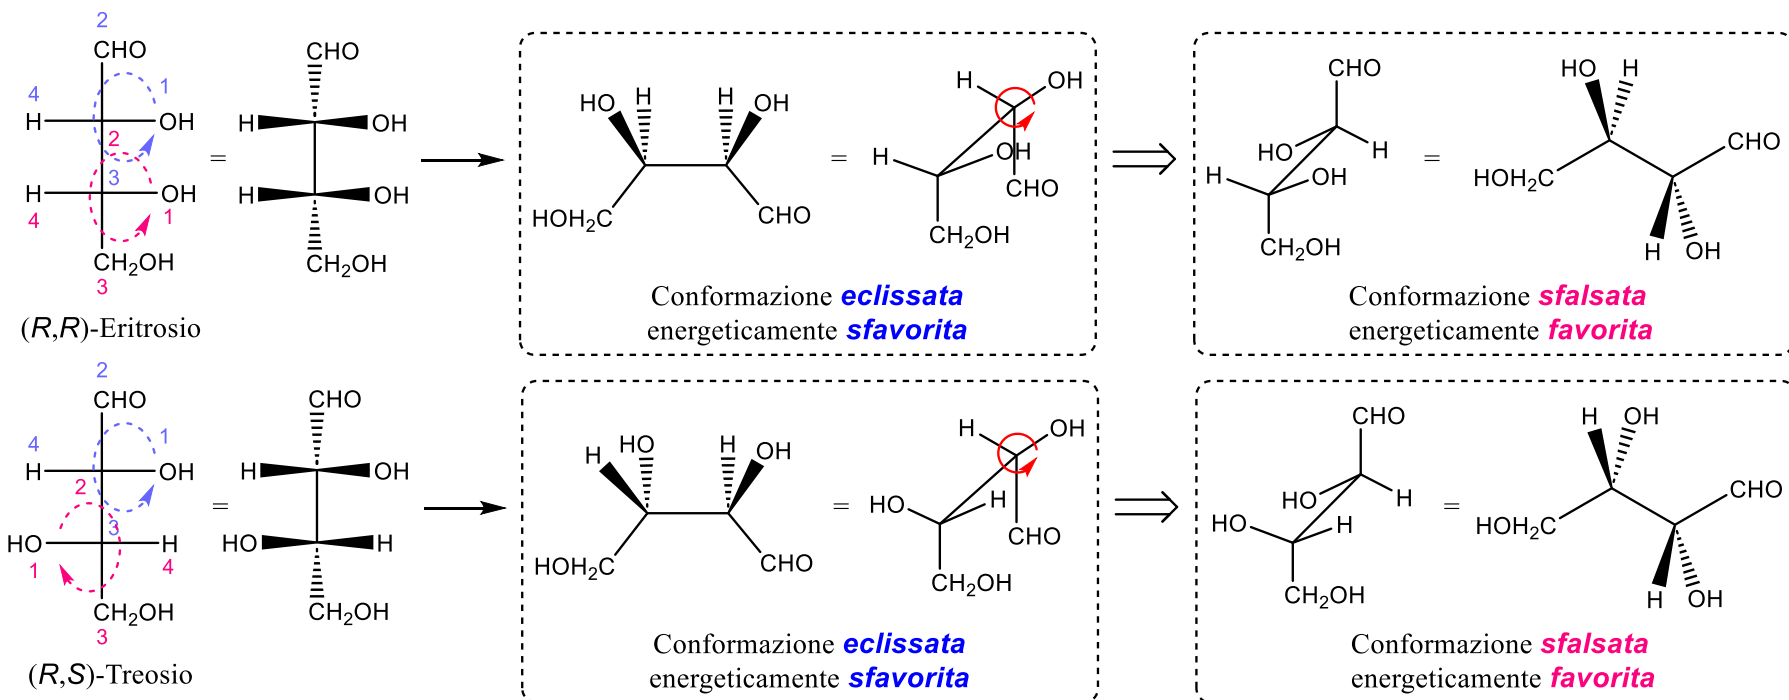

RAPPRESENTAZIONE DI FISCHER

1° caso: 1 centro stereogenico, esempio della gliceraldeide

2° caso: 2 centri stereogenici, esempio del treosio e eritrosio - procedura a ritroso

Esercizi proiezioni di Fischer: rappresentare le seguenti molecole mediante a proiezione di Fischer e determinare la configurazione assoluta dei centri stereogenici
